Parts of a Lock

Sense of Feel

- Pay attention to the movements of the pins. They will tell you (almost) everything about the lock and its current state,
- Don't forget to use your tension wrench. Minor feedback in the lock will translate to large feedback in the wrench. (More on this later)
- RELAX!!

Tools of the Trade

- Tension Wrenches
- Picks
- Shims
- Small and pointy objects (paperclips, plastic toothpicks, etc)

Tools of the Trade - Tension Wrenches

- Two different types:
 - **Top of the Keyway**
 - Punched out of thicker steel
 - **Bottom of the Keyway**
 - Thinner but more versatile (I make mine with wiper inserts)

Tools of the Trade - Picks

There are tons of different designs but they all basically fall into 3 types:

- Rakes (wave, city, snake)
- Kinetic (hooks, zipper)
- Multi-Purpose (Diamond, Ball, Snowman/Figure-8)

Picking Styles

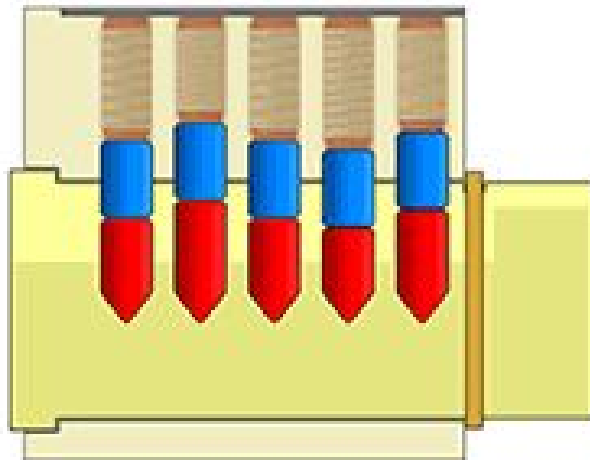

There are 4 basic picking styles and almost every lock can be picked by one or more of them. The order they are listed below is the order in which they are most effective:

1. Rocking
2. Zipping
3. Bitch Picking
4. SPP (Single Pin Picking)

Picking Styles - SPP

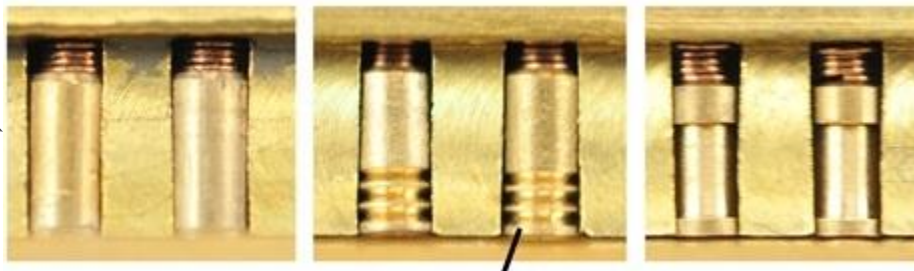

DVD Bonus Content - Pin Types

Not all pins are created equal. Each has its merits and issues.

Standard Pins

Serrated Pins

Spool Pins

One Last Note

- Stay Legal - Not all states allow non-licensed individuals to own picks
 - DON'T do anything illegal with this...yadda yadda yadda
